THE NEW YORK STATE DOANE PROJECT

By Maris Tirums

I refer to the on-going effort to assemble as complete a list as possible of all Doane cancelers used in New York State as the "*Doane Project*." In mid 1993, I volunteered to assume the role of "Doane coordinator" for our state. Before that time, Jack Haefeli had been the New York Doane coordinator, and all of my work was added to the body of information that Jack had already compiled.

The *Doane Project* has made large strides, to the point where I believe the Empire State Postal History Society will be asked later this year to undertake the publication and distribution of a new reference book on New York State postal history, dealing with Doane cancellations.

Information for the *Doane Project* has been supplied by many people, and I am grateful to all of them for their interest, and for their generosity in taking the time to report data to me about their Doane canceled covers. However, and I cannot emphasize this too strongly, a great deal of information is still unknown, and much of the accumulated data can still be improved. I urge everyone reading this to contribute to the *Doane Project* by reporting the following facts about any covers you have with a Doane cancel:

- post office or town name
- Doane cancel type
- number within killer bars
- full date in cancel
- unusual ink color, inverted date, or other unique feature if such exists.

BACKGROUND

The U.S. Post Office Department was aware that the clarity of the metal handstamps used by many post offices to cancel mail in the late 19th century and early years of the 20th century was very poor. Cancellations were often incomplete, blurred, faint, and otherwise unreadable. Cover collectors realize, I think, that this was so as examples of sharp, clear postmarks from this period are in the minority.

After experimenting with newly designed handstamps, the Post Office Department began to supply a relatively small number of fourth class post offices with a rubber handstamp for canceling mail. The handstamps were comprised of a circular date stamp at the left and five horizontal, parallel bars at right. The three middle bars were broken to create a gap in the center of the killer bar portion of the cancellation, and in this gap was placed a number. This canceler later became known as a Type 1 Doane canceler, or simply Doane.

TYPE 1

The initial general distribution of Type 1 Doane cancelers started in autumn of 1903. Newly established post offices between August 28 and September 28, 1903 were supplied with this canceler. Also, existing post offices which requested replacements for their old cancelers during this same short period were also supplied with a Type 1 canceler.

The precise number of post offices which received a Type 1 canceler is not known. The Post Office Department announced that some 500 offices were supplied with them on an experimental basis. It is also known that about 250 post offices were established nationally during the August 28 to September 28 period. As for replacement cancelers, an estimated 850 offices requested new cancelers during September 1903. Thus, the hypothetical maximum number of offices across the United States supplied with a Type 1 canceler is 1600.

TYPE 2

Type 2 Doanes replaced the Type 1 design. Type 2's differed from their predecessors in one key respect:

* instead of five bars in the killer bar portion of the canceler, there were now four sets of thin parallel bar giving the appearance of four "hollow" bars.

Type 2 Doanes are slightly larger in diameter than the Type 1's, but this difference is too small to be relied upon for identification.

Type 2 Doane cancelers were distributed to new post offices established from September 29, 1903 into the summer of 1905. As with the Type 1's, the Type 2 were supplied to offices which requested replacement cancelers during this period.

Type 2 Doanes were distributed for about 22 months, and are the most common of the three types finally used.

TYPE 3

Type 3 Doane cancelers were the last

of the three types used, and they were supplied to new post offices established after July 1, 1905 until the autumn of 1906. Type 3's were also used as replacements for existing offices as well as for newly established post offices.

The Type 3 Doane cancellation is recognizable by the following features:

- the four killer bars were solid rather than being four sets of thin parallel bars - the "hollow" appearance of the Type 2 killer bars was thus changed;
- the Type 3 circular date stamp portion is the largest of the three types, and measures 31 to 32 mm;
- Type 3 Doanes used only block lettering whereas the earlier types sometimes used Romanesque "serifed" lettering.

DOANE CENSUS

La Posta, journal of United States postal history, has been instrumental in promoting the collection and publication of data on Doane cancellations. Richard W. Helbock, editor of La Posta, published a book entitled United States Doanes, A Catalog of Doane Cancellations Used in United States Post Offices, in 1993 which provided lists by states of all known Doanes, and useful introductory information about these cancels.

Helbock's book includes information about the nationwide total number of Doanes. The census figures are based on some facts and some reasoned assumptions. The estimated census numbers are as follows:

TYPE 1 - distributed during approximately one month to a total of **1600** new and existing post offices;

TYPE 2 - distributed during approximately 22 months to a total of **17,500** new and existing post offices; and

TYPE 3 - distributed during approximately 16 months to a total of **7500** new and existing post offices.

Helbock estimates the national total number of Doanes to be 30,000 within an estimated 5-10 % of the actual number.

How many of these are New York State Doanes? Helbock's figures indicate that almost 1200 New York Doanes exist. The list that follows has a little over 700 listings. My intuitive belief, based on having worked on the *Doane Project* during the last 18 months, is that the 1200 figure is high, but inasmuch as more digging is needed, we undoubtedly still have unreported post offices which will expand the current list.

THE DOANE PROJECT INVITES YOU

This is a compilation of information that virtually every E.S.P.H.S. member can help with. Many of you have already been very helpful with Doane data. I urge one and all, who have not already done so, to send me inventories of your Doane canceled covers. I have already indicated the data that every report should include.

What if part of the cancellation is illegible? Report only the information that you feel confident about being able to determine, but report the cancellation nevertheless.

What if the date of the cancellation falls within the earliest and latest dates already shown in the table? Report the cover anyway! Because -

1. your report may confirm or challenge an existing listing that may be based on only a few previous reports; and
2. your report will be added to the inventory being compiled which will be useful in determining relative scarcity.

CAUTION

The Doane cancelers were eventually replaced by standard four-bar cancelers at many post offices. The four-bar cancels look very much like Type 3 Doanes, except of course, that they have no number within the killer bars. It is not hard to confuse a Type 3 Doane with a four-bar cancel. If you cannot detect the presence of a number within the killer bars, it most likely is **not** a Doane, and you should not report it.

If the cancel has five killer bars, it is most likely a Type 1 Doane. If the cancel has four "hollow" killer bars, it is almost definitely a Type 2 Doane. But if the cancel has four **solid** killer bars and no discernible number within the bars, it should be regarded as a four-bar cancel rather than a Doane.

SEND YOUR DATA TO ME

Maris Tirums
P.O. Box 5475
Albany, N.Y. 12205-0475

KEY TO MASTER LIST OF DOANE CANCELS

The Master List of Doane cancels has six columns:

- Column 1: Name of post office (which is usually the name of the town where the post office is located)
- Column 2: County where post office was located indicated by three-letter abbreviation (same abbreviation as used by Smith & Kay in *Postal History of New York State*)*
- Column 3: Doane cancel TYPE
- Column 4: Number found in killer bars of cancel
- Column 5: The earliest reported date of usage of the cancel**
- Column 6: The latest reported date of usage of the cancel

* See the list of New York State counties and the corresponding abbreviations.

** If only one report for a Doane cancel has been received, the date of usage will appear as the EARLIEST date of usage in COLUMN 5, and no date will appear in COLUMN 6.

• This heavy dot is used to indicate that the information is not available. Depending on the clarity of the cancel, often the number in the killer bars or the full date cannot be read. In a few cases, the Doane type is uncertain.

NEW YORK STATE ROUTES FAM #1 AND CAM 20

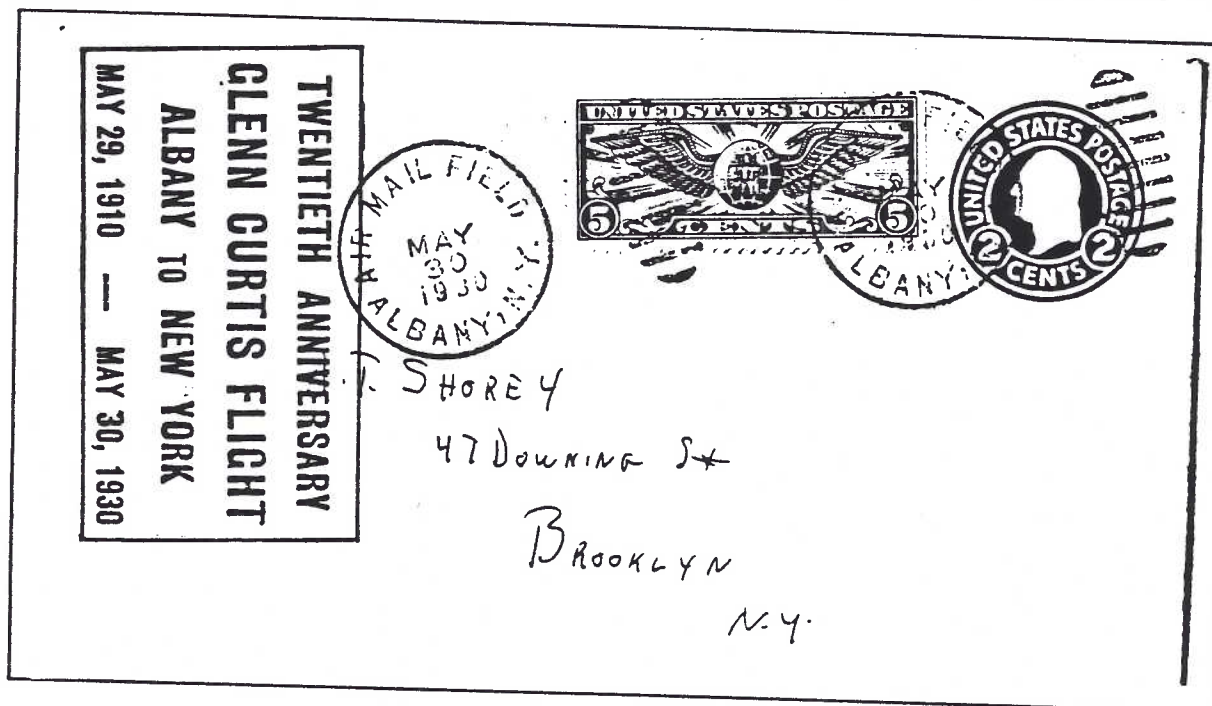

by Martin Margulis

Experimental flights, carrying mail were well under way by 1912. Some carried a lot of mail, but for only short distances. While, in theory, this showed that air mail was practical, it took the much improved technology brought about by World War I to make what was possible an actuality.

After the War surplus planes and pilots existed in abundance. Those with the right characteristics were put into use carrying both mail and passengers. By 1924 we find the start of large airlines which are still with us—American & United Airlines.

there was limited demand for the service. This is especially true as the passenger rode in an open cockpit.

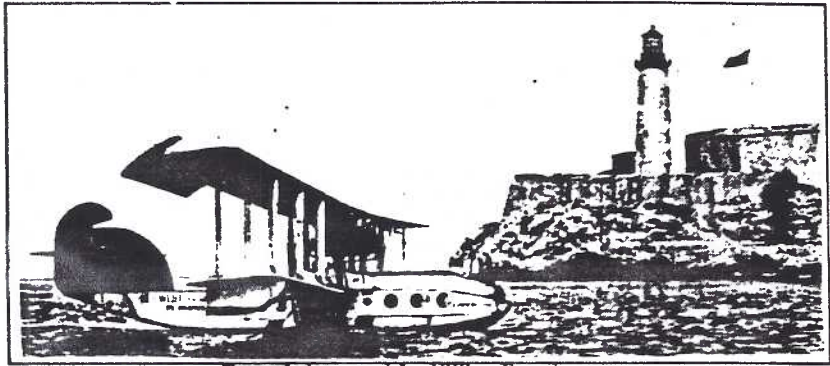

In 1922 and for part of 1923 Aeromarine Airlines had a New York City to Detroit special service. The planes, which had interior seating for passengers flew up the Hudson River Valley to Montreal with a stop at Albany. From Montreal it flew across (actually down the middle) of the Great Lakes (Lakes Erie and Ontario), to Buffalo to Detroit. It also offered sight seeing flights over Lake Erie. Unfortunately, the Airline had overexpanded

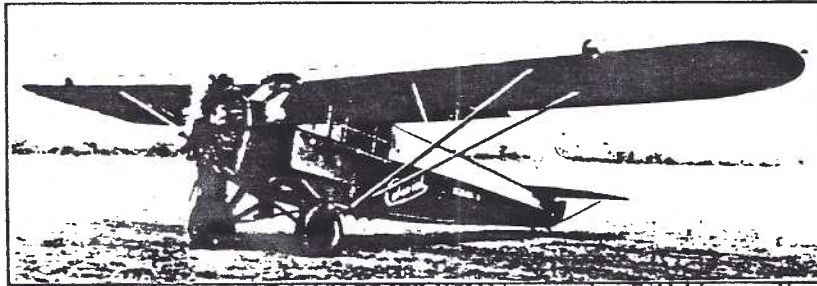

The first flight to Albany from New York City took place, with stops en route, on May 29-30, 1910. It carried no mail. Even after the war air speeds were slow, about 100 miles per hour, and the average speed including stops reduced this to 75 miles per hour. In as much as this was not a great improvement over the Twentieth Century Ltd. and not nearly as comfortable,

and ceased service in September 1923.

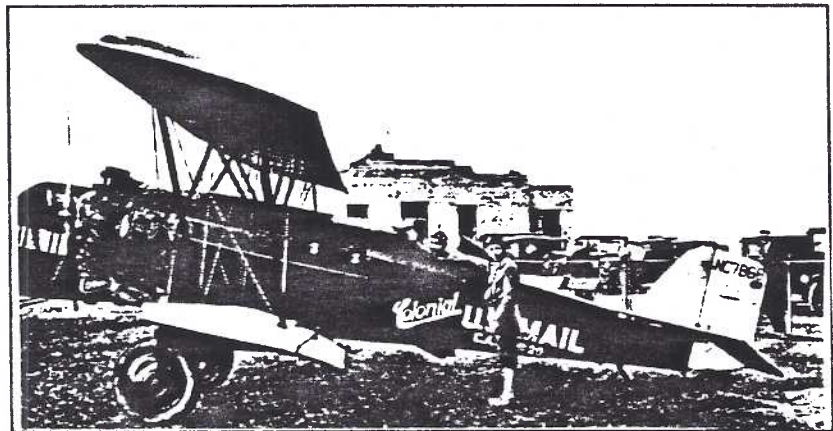

On December 17, 1927, Colonial Western Airways Inc. began passenger, mail and express service between Cleveland, Ohio and Albany, New York via Erie, Pennsylvania and Buffalo, Rochester, Syracuse, Utica, and Schenectady, New York using Pitcairn PA-5 and mostly Fairchild FC-2 planes.

Type of plane used for NYC to Detroit route.

Canadian Colonial Airways' Fairchild FC-2W2 NC8004 was used on FAM-1 between New York and Montreal. (Smithsonian Institution)

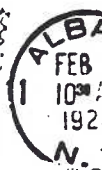

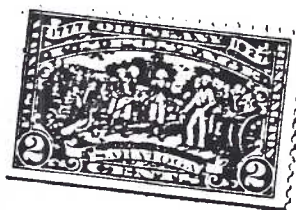

One of Colonial Western Airways' Pitcairn PA-5 Super-Mailwings which were used on the Mohawk Valley Cleveland—Albany route. (American Airlines)

The service at this time did not include New York City. However, on March 6, 1928, Canadian Colonial Airlines was organized to provide service from Montreal to New York City via Albany. The service began on October 1, 1928, New York City to Montreal. At first the return service stopped at Albany. The New York to Montreal service is designated as (FAM-1) Foreign Air Mail Route Number 1. The cross New York City and beyond service

was designated CAM 20. For the record the pilots for the FAM-1 flights were Billy Hughes, New York to Albany and Paul E. Reeder, Montreal to Albany and back.

On April 11, 1932 service was begun from Albany to New York City from Montreal.

Even though flight service from Cleveland to Albany started December 17 - 19, 1927, the inaugural service on CAM 20 began June 1, 1928. Most of the cities in

THIS LETTER
CARRIED BY AIRPLANE
FROM ALBANY
TO NEW YORK CITY

Chas. G. Riess,

Albany, N. Y.

Se

*Chas. G. Riess,
116 Grove Ave.,
Albany, N. Y.*

(Albany to NY cachet - both sides) This service is not explained in AAMA catalogue Volume IV, but obviously took place.

the service are represented by covers except Syracuse. This is extremely embarrassing and I apologize. The covers which exist in the thousands are not difficult to obtain, though not in Texas. They are inexpensive

as are all the others in the series, the 'rarest' being Schenectady. Rome's name was added January 7, 1929 to be nice as it shared an airport with Utica which was on the original list.

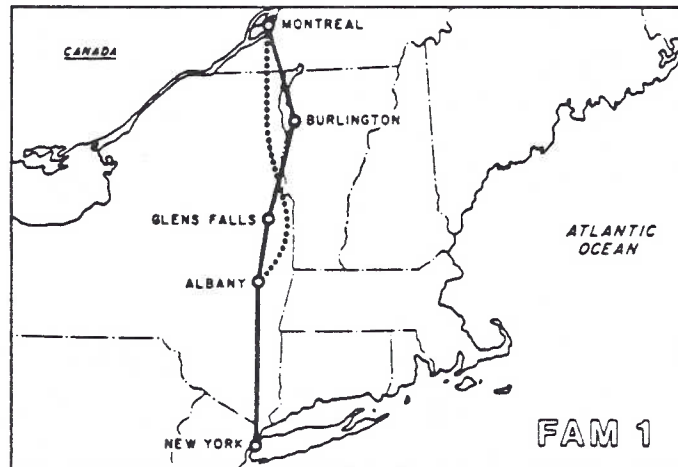

FOREIGN AIR MAIL ROUTE No. 1

Inaugural Service: NEW YORK-MONTREAL, CANADA

October 1, 1928

Inaugural Contractor: CANADIAN COLONIAL AIRWAYS

Present Carrier: Eastern Air Lines (AM Route No. 72-F)

When this route was inaugurated, Albany was the only intermediate point. At Montreal connection was made with domestic Canadian service to the capital of Ottawa. At that time the return flight terminated at Albany where mail was forwarded by train or domestic U.S. air routes to destination.

Type F1a

Type F1b

Cachets—New York and Albany, Type F1a; Montreal, Type F1b.

Pilots—Billy Hughes between New York and Montreal and Montreal and Albany;
Paul E. Reeder, Albany to Montreal.

New York-Montreal, October 1-1, (magenta, black, combination)	(180)	1.50
Albany-Montreal, October 1-1, (magenta, black, purple)	(121)	1.50
Montreal-Albany, October 1-1, (green)	(25,500)	1.50

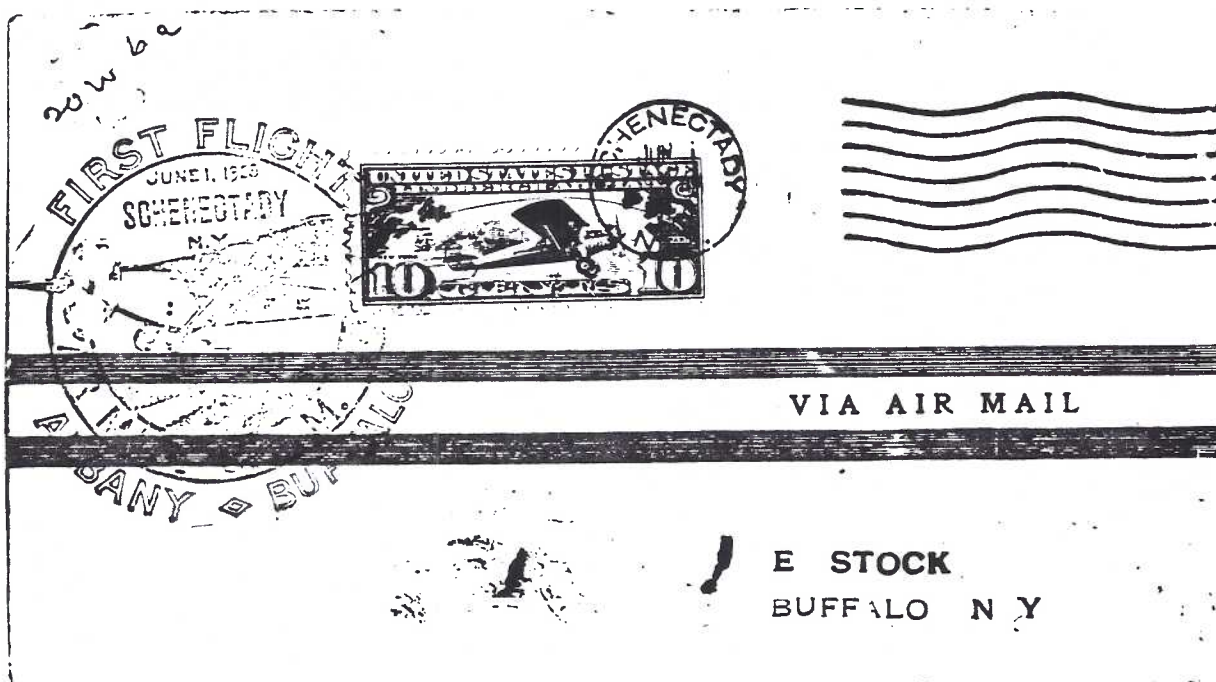

Albany to Buffalo went onto Cleveland which was the real terminus of the service. The cover from Schenectady did terminate in Buffalo, though.

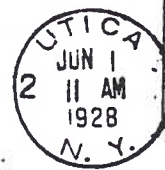

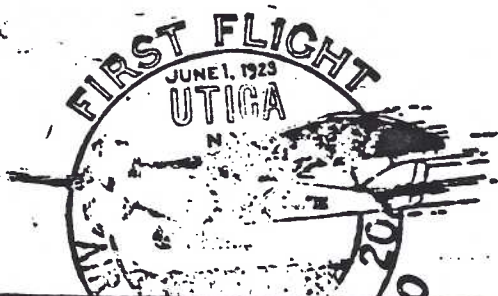

Of the two Utica covers, one went to Albany and the other to Buffalo. The Rochester cover only went to Syracuse. The Buffalo cover also went to Albany, how-

ever, you can see all this for yourself. On May 15, 1931, Route 20 was combined with former Route 16 via Cleveland and continued on to Fort Worth, Texas. However, the cachets did not include Cleveland only Nashville, Tennessee to Fort Worth. On

August 1, 1931 the route was extended from Albany to New York City. That, however, is another article. Like Topsy, CAM 20 just grew and grew.

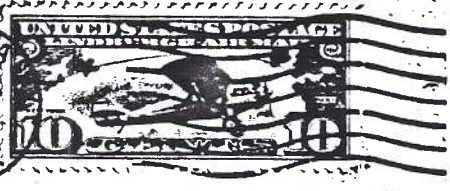

(If anyone wanted to sell Syracuse covers, I would be glad to hear from you.)
